

Tool-Flo's New Coolant Fed Clamps

Tool-Flo proudly announces our new coolant fed clamps. The unique feature of our design is that the tool holder does not need to be changed or modified. It easily connects to existing coolant pumps on manual lathes with good coolant flow as is shown in the photo. Simply replace your current top clamp with our new coolant fed clamp and have a direct coolant feed to the cutting edge for internal and external applications. We have available all of the plumbing hardware required for high pressure applications. Our new design is currently available for our Flo-Lock/Chip-Flo line. Contact us for further details.

See our complete line of standard cutting tools and tool holders at www.toolflo.com. We can quote and manufacture any special insert or holder in small and large quantities.
